DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-40, 72-76, 83, 84, and 87-90 are drawn to a stacked gate region of memory cell, classified in class 257, subclass 321.
 - II. Claims 41-71, 77-82, 85 and 86 are drawn to method of forming a stacked gate region, classified in class 438, subclass 263.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the undefined method of forming the tunnel oxide can be done by thermal growth at a temperature of between about 800 and 1150 C in a diluted O₂ ambient. Furthermore the trenches can also be created by a wet etch.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
